

Unit 7 Lesson 13: Constants in Quadratic Equations

1 Math Talk: Halved and Squared (Warm up)

Student Task Statement

For each value of b , mentally find $\left(\frac{b}{2}\right)^2$.

$$b = 6$$

$$b = \frac{1}{2}$$

$$b = \frac{2}{5}$$

$$b = 0.8$$

2 Solving Quadratics with Perfect Squares

Student Task Statement

Solve each of these equations for all values of x that make the equation true.

1. $(x + 2)^2 = 9$

2. $(x - \frac{1}{2})^2 = 4$

3. $(x + 1)^2 = 8 + 1$

4. $(x - \frac{1}{3})^2 = \frac{10}{9} - \frac{1}{9}$

5. $(x - 6)(x - 6) = 81$

3 Make It a Perfect Square

Student Task Statement

For each expression:

- Find a value that could be added as a constant term to make each expression a perfect square.
- Add the value you found and rewrite the expression in factored form.

1. $x^2 + 20x$

2. $x^2 - 4x$

3. $x^2 - 2x$

4. $x^2 + x$

5. $x^2 + 5x$

6. $x^2 + 1.4x$
