

Lesson 14: ¿Qué es un diagrama de puntos?

Standards Alignments

Addressing 2.MD.A.1, 2.MD.D.9

Building Towards 2.MD.D.9

Teacher-facing Learning Goals

- Interpret a line plot.
- Understand that a line plot is used to represent and interpret numerical data.

Student-facing Learning Goals

- Aprendamos una nueva forma de representar datos.

Lesson Purpose

The purpose of this lesson is for students to learn about the ways a line plot can be used to represent data collected from measuring objects.

In a previous unit, students created and interpreted two representations of categorical data, bar graphs and picture graphs. In a previous lesson, students measured length using metric and customary units.

In this lesson, a **line plot** is defined as a way to show how many of each measurement using an x for each measurement. Students collect numerical data by measuring their hand spans and create a class line plot to display their measurements. Through the lesson activities, students learn that each x on the line plot represents one measurement. They learn that the scale of the line plot shows the length units used to measure and resembles the way length units are labeled on a ruler. Students notice that the length units on the scale of the line plot are not exactly the same length as the length units used to measure (inches), but that labels can help others know what length unit was used (MP2, MP6). Students will gain experience working with line plots throughout the rest of the section. Save the class line plot you create for reference in future lessons.

Instructional Routines

Notice and Wonder (Warm-up)

Materials to Gather

- Rulers (inches): Activity 1
- Sticky notes: Activity 1

Lesson Timeline

| | |
|------------------|--------|
| Warm-up | 10 min |
| Activity 1 | 20 min |
| Activity 2 | 15 min |
| Lesson Synthesis | 10 min |
| Cool-down | 5 min |

Teacher Reflection Question

In a future lesson, students will create their own line plots. What do students need to understand in order to be successful? How did this lesson prepare them to create their own line plots?

Cool-down (to be completed at the end of the lesson)

🕒 5 min

Palmas

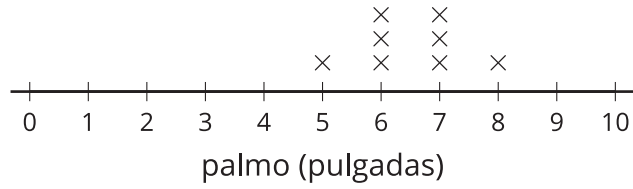

Standards Alignments

Addressing 2.MD.A.1, 2.MD.D.9

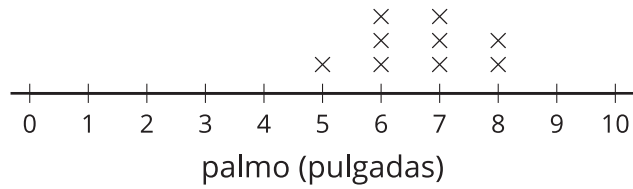

Student-facing Task Statement

1. Tyler recolectó datos sobre la longitud de los palmas de los estudiantes de su clase.
 - Tres estudiantes tienen palmas de 6 pulgadas.
 - Solo 1 estudiante tiene un palmo de 5 pulgadas.
 - Tres estudiantes tienen palmas de 7 pulgadas.
 - Dos estudiantes tienen palmas de 8 pulgadas.
- a. Marca el diagrama de puntos que puede representar los palmas de la clase de Tyler.

Palmos de la clase

Palmos de la clase

b. Explica cómo lo sabes.

Student Responses

1.
 - a. Students circle the second line plot.
 - b. Both match the first two statements, but the first line plot has 1 student with a hand span of 8 instead of 2.
