

# Unit 4 Lesson 15: Evaluating Expressions with Exponents

## 1 Revisiting the Cube (Warm up)

### Student Task Statement

Based on the given information, what other measurements of the square and cube could we find?

## 2 Calculating Surface Area

### Student Task Statement

A cube has side length 10 inches. Jada says the surface area of the cube is  $600 \text{ in}^2$ , and Noah says the surface area of the cube is  $3,600 \text{ in}^2$ . Here is how each of them reasoned:

Jada's Method:

$$6 \cdot 10^2$$

$$6 \cdot 100$$

$$600$$

Noah's Method:

$$6 \cdot 10^2$$

$$60^2$$

$$3,600$$

Do you agree with either of them? Explain your reasoning.

### 3 Row Game: Expression Explosion

#### Student Task Statement

Evaluate the expressions in one of the columns. Your partner will work on the other column. Check with your partner after you finish each row. Your answers in each row should be the same. If your answers aren't the same, work together to find the error.

| column A                                       | column B                                       |
|--|--|
| $5^2 + 4$                                      | $2^2 + 25$                                     |
| $2^4 \cdot 5$                                  | $2^3 \cdot 10$                                 |
| $3 \cdot 4^2$                                  | $12 \cdot 2^2$                                 |
| $20 + 2^3$                                     | $1 + 3^3$                                      |
| $9 \cdot 2^1$                                  | $3 \cdot 6^1$                                  |
| $\frac{1}{9} \cdot \left(\frac{1}{2}\right)^3$ | $\frac{1}{8} \cdot \left(\frac{1}{3}\right)^2$ |
