

Unit 7 Lesson 12: Constructing the Coordinate Plane

1 English Winter (Warm up)

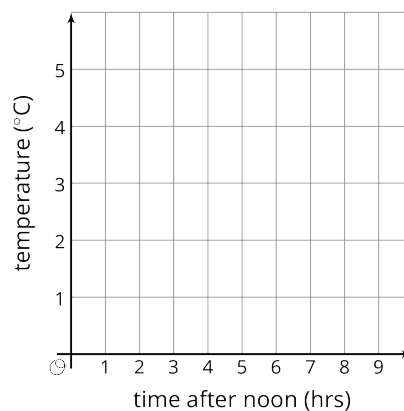

Student Task Statement

The following data were collected over one December afternoon in England.

time after noon (hours)	temperature (°C)
0	5
1	3
2	4
3	2
4	1
5	-2
6	-3
7	-4
8	-4

- Which set of axes would you choose to represent these data? Explain your reasoning.
- Explain why the other two sets of axes did not seem as appropriate as the one you chose.

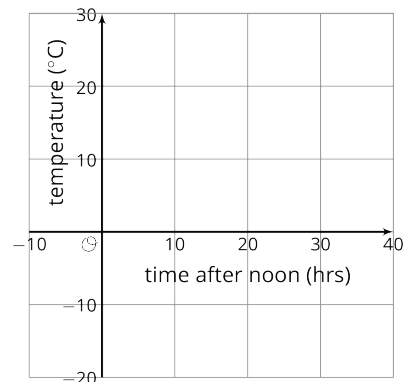

A

B

C

2 Axes Drawing Decisions

Student Task Statement

1. Here are three sets of coordinates. For each set, draw and label an appropriate pair of axes and plot the points.

a. $(1, 2)$, $(3, -4)$, $(-5, -2)$, $(0, 2.5)$

b. $(50, 50)$, $(0, 0)$, $(-10, -30)$, $(-35, 40)$

c. $(\frac{1}{4}, \frac{3}{4}), (\frac{-5}{4}, \frac{1}{2}), (-1\frac{1}{4}, \frac{-3}{4}), (\frac{1}{4}, \frac{-1}{2})$

2. Discuss with a partner:

- How are the axes and labels of your three drawings different?
- How did the coordinates affect the way you drew the axes and label the numbers?

3 Positively A-maze-ing (Optional)

Student Task Statement

Here is a maze on a coordinate plane. The black point in the center is $(0, 0)$. The side of each grid square is 2 units long.

1. Enter the above maze at the location marked with a green segment. Draw line segments to show your way through and out of the maze. Label each turning point with a letter. Then, list all the letters and write their coordinates.
2. Choose any 2 turning points that share the same line segment. What is the same about their coordinates? Explain why they share that feature.
